

TP 3 Update

- **Interface:** I added buttons for volume, muting, and delaying. Also, I added a red bar that follows the music as it is played. This allows the user to see how much of the audio has passed in real time.
- **Additional Features:** I added a help button on each screen that will give more information about the particular step of PyGarageBand they are on. This way, the user will know exactly what to do with all the buttons on the screen
- **Graphical Changes:** None

Other than these changes, there are no noticeable changes between my planned PyGarageBand and my final one.
